DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/22/08 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al (New Fast Algorithms for the Estimation of Block Motion Vectors) in view of Pullen et al (5,923,376).

With respect to the newly added limitation, Figures 1 and 2 of Liu et al illustrate the concept of the subsample pixels from the set of two or more pixels from the block. Although the illustrative examples are dealing with different 4 to 1 subsampling ratio patterns, one of ordinary skill in the art would have had no difficulty in recognizing that the same subsampling technique would be equally applicable to other ratios. In particular, it would have been obvious to one of ordinary skill in the art that when the subsampling ratios are 8 to 1 or 16 to 1, for examples, each

pixel from the set from the block would be collinear with all other pixels in the set from the block.

4. Claims 10-15 are also rejected under 35 U.S.C. 103(a) as being unpatentable over Liu et al (New Fast Algorithms for the Estimation of Block Motion Vectors) in view of Pullen et al (5,923,376) for the same reasons as set forth in Section 3 of the previous office action, dated 7/11/06.

With respect to the newly amended limitations in independent claim 10, Liu et al already discloses that the first and second minimum blocks consists of a collinear line of pixels (e.g. odd rows for pixels a and b).

Response to Arguments

5. Applicant's arguments filed 4/22/08 have been fully considered but they are not persuasive.

6. In response to applicant's argument on pages 10-11 of the Remarks that the references fail to show certain features in claims 10-15 of applicant's invention, it is noted that the features upon which applicant relies (i.e., collinear with all other pixels) are not recited in the rejected claim(s) 10-15. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
